

# VERDYOL

## VERDYOL STANDARD

### A NATURAL ENVIRONMENT

Used in Hydroseeding  
for superior erosion protection

#### Specifications/Instructions

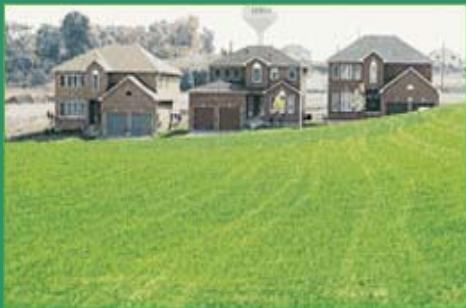

**Verdyol Mulch** standard creates a natural, non toxic and protected environment on drastically disturbed soils, mine wastes, nutrient deficient soils, steep slopes and subsoils. It creates a microclimate to enhance seed germination and growth. Also, Verdyol mulch allows water to penetrate the soil, protect and keep the seeds in place and retain moisture. While the seed gets established, the mulch biodegrades and adds nutrients to the soil.

#### Specifications

Sun dried natural plant fibre (Straw and cotton)  
Cellulose pulp (newspaper)  
Fibre length: 15-25mm (.06" - 1.0")  
Packaged in bags of 22.7 kgs (50 lbs)

Verdyol can add other ingredients to meet your special specifications.  
i.e. extra cellulose, peat, polymer, tackifier, dyes, etc.

#### Application

Fill hydroseeder as follows:  
add water and seed mix  
start adding verdyol mulch as soon as tank is 1/3 full  
add fertilizer and tackifier (if required)  
Mix thoroughly for about 10 minutes, then spray evenly onto surface at 1120 - 2240 kg/ha (1000 - 2000 lbs /acre) (depending on site conditions)
